

11.1 Citing Resources

Any sources you use in your site (content that you did not write or create yourself, including text and images) must include in-text citations and references in APA format. It is not necessary to list sources that were consulted if they have not been quoted or paraphrased in the text of the paper or project. No more than a combined total of 30% of a submission can be directly quoted or closely paraphrased from outside sources, even if cited correctly.

APA has specific guidelines for when it is necessary to provide citations and how the citations should be formatted. Please note that it is considered plagiarism if you fail to cite your sources correctly.

For a helpful resource on APA style, as well as for WGU policies regarding citations, refer to the [APA Resources \(opens new tab\)](#) web link.

Images that you may have used from online sources that have clearly been labeled as OK for reuse do not need to be cited. If an image is not clearly marked as OK for reuse you do need to cite it on your website. An easy way to search for images that are OK to use is to do an image search and filter using the search tools for only images that are labeled for reuse.

11.2 Web Hosting

Read the following chapters in the HTML & CSS e-text: [Chapter 19 Practical Information \(opens new tab\)](#).

Once you open the new tab, read the following articles:

- Read Web Hosting Introduction
- Read Web Hosting Types
- Read Link Types: Absolute, Relative, Root-relative
