

User Experience Design

Build Employability Skills and Competence

As you work through this course you'll strengthen existing skills and acquire new skills that are highly valued in the dynamic market of UX Design. Such skills include:

- 1. Information Literacy
- 2. Group interaction
- 3. Applied analytical skills

In this course you can demonstrate these skills by passing a final assessment that measures whether you have mastered the following four competencies:

Competency 4021.2.1: UX Design Processes

Establishes Timeframes: The learner establishes timeframes for user experience projects based on business requirements.

Competency 4021.2.2: UX Design Tools & Techniques

Designs Wireframes and Prototypes: The learner designs application wireframes and prototypes using industry standard tools and techniques.

Competency 4021.2.3: Usability Testing

Conducts Usability Testing: The learner conducts formal and informal usability testing as part of application design prototyping.

Competency 4021.2.4: Data Evaluation

Updates Application Design: The learner updates application designs based on user testing analysis results.

The learning resources contained within this course can be used to learn more about UX, to help you move into a career in UX, or to help you in your existing role as a UX professional. Use these resources to help you learn more about the people you design for and, in turn, design successful products.
