INTRODUCTION TO SYSTEMS THINKING

Course Introduction

Introduction to Systems Thinking provides learners with the skills required to engage in a holistic systems-based approach to analyzing complex problems and solutions. This course introduces the foundational concepts and principles of systems thinking and provides opportunities to use a systems thinking approach to analyze and evaluate real-world case studies. The course will culminate with using systems thinking to develop a solution to an authentic, complex problem. This course has no prerequisites, but general education math (C955 or C957) is preferred.

Because the course is self-paced, you may move through the material as quickly or as slowly as you need to, with the goal of demonstrating proficiency in the three competencies covered in the final assessment. If you have no prior knowledge of this material, you can expect to spend 30 to 40 hours on the course content.
